

SupplierPORTAL – Supplier Portal

SupplierPortal™ provides Visibility, Collaboration and Freight Cost Savings when transacting with Suppliers.

SupplierPortal™ is a web portal solution that allows suppliers to see purchase orders assigned to them using a web browser or mobile device. By accessing the portal, the supplier can search/lookup purchases orders, provide order acknowledgments, confirm on delivery dates, enter freight information, generate shipment notifications, create carrier shipments on purchasers account and generate inbound delivery.

By using the portal solution companies can standardize on a process that all suppliers must use. This standardization helps with the collaboration between trading partners, provides better visibility and helps control freight costs.

The SupplierPortal interacts with SAP real-time to update purchase orders with supplier information which streamlines the process flow and allows the organization to track all shipping events.

✓ DELIVERABLES

- Portal access for company and supplier collaboration using web browser
